

PROMATIS

EXTRACTOR / DATASMART.

FLEXIBLE. FAST. RELIABLE.

What is PROMATIS Extractor?

The Extractor is a universally applicable software tool made especially for sophisticated data extractions. The modular structure of the application as well as the standardized processes offer application-related extraction routines required in today's business processes under consideration of internal and external regulations.

The Extractor is the ideal tool when reliability and stability are required, and thus offers a well thought-out solution.

What is PROMATIS DataSmart?

DataSmart is the new generation of data extraction. Using the latest technologies and based on the functionalities of the Extractor, data are extracted from different sources and processed intelligently for the versatile areas of application.

Application-related plug-ins and standard dashboards make the DataSmart a tool that can be used universally and that, thanks to its application-oriented intelligence, represents a real benefit for the company.

Perfect combination – Extractor and DataSmart

Maximum flexibility in all areas – this is how PROMATIS tools, the Extractor and the DataSmart can be described. Finding the suitable solution for each application area and doing the same to the different implementation scenarios, areas of application, and technical conditions.

These products combine the state-of-the-art technologies, sophisticated architecture, high practical affinity, and many years of experience with complex systems, enabling already today the data extraction of the future.

PROMATIS Best Practice Solutions

PROMATIS Best Practice Solutions are functional extensions and adaptations of Oracle applications. They were developed directly in practice for practice and can be installed without risk. The result: The economic benefit of your Oracle applications increases in a fast and sustainable way.

Oracle Enterprise Applications

Oracle's market-leading enterprise applications impress with their modern software architecture, which offers flexible possibilities for adaptation to customer-specific requirements. On-premises, cloud, and hybrid deployment models are also supported.

Extractor Features:

- » Suitable for Single-Site
- » Modular extensions for specific application areas
- » Available for Oracle E-Business Suite and Oracle ERP Cloud
- » Standardized installation routines
- » Create CSV files for seamless further processing
- » Automatic generation of structure information in the Audicon/IDEA description standard
- » Integrated client management

DataSmart Features:

- » Suitable for Multi-Site
- » Minimum transmission time due to future-oriented intelligence
- » High-performance solution
- » Seamless integration of multiple databases both on-premises and in the cloud
- » Modular extensions for special application areas
- » Available for Oracle E-Business Suite and Oracle ERP Cloud
- » Standardized installation routines
- » Automatic generation of structure information in the Audicon/IDEA description standard
- » Integrated client management
- » Standard dashboards with evaluations and analyses

Plug-ins:

The additional modules offer optimal support for the realization of application-specific tasks. The following PROMATIS Plug-ins are available:

- » MEC / GoBD
- » MDM (Master Data Management)
- » DATEV
- » P2P
- » O2C
- » HCM E-Balance
- » VAT Elster / UVA Elster
- » ESL / ZM Elster
