Summary

This documentation represents a new installation of the PROMATIS Extractor App. The new provided PROMATIS Extractor App 4.0.4. version includes the respective patch for log4j, but it does not include the customer specific config.pec, licence.lic and the plugins. Therefore, an existing installation of PROMATIS Extractor App 4.0.4 version is required. The customer specific config.pec, licence.lic and the plugins has to be copied from the existing one and will be stored in the new provided PROMATIS Extractor App.

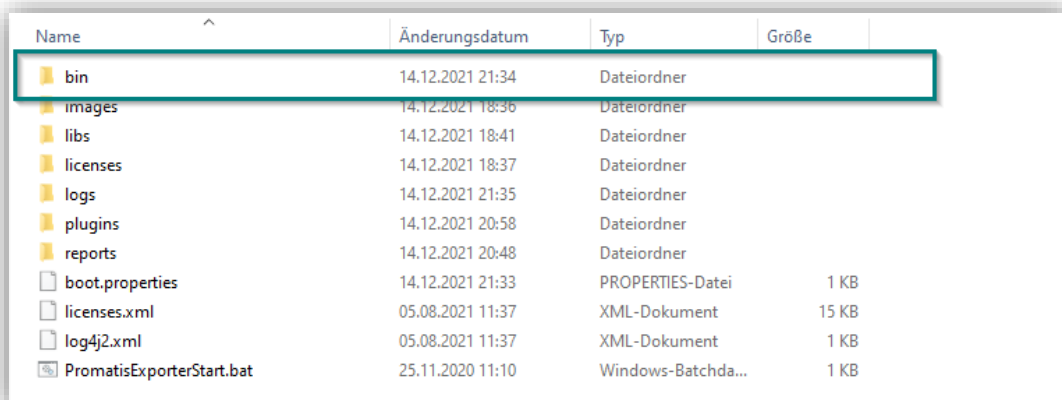

Following screenshots describe how the installed version of the PROMATIS Extractor App can be checked.

First of all, please open the folder where the currently **installed** PROMATIS Extractor App is stored.

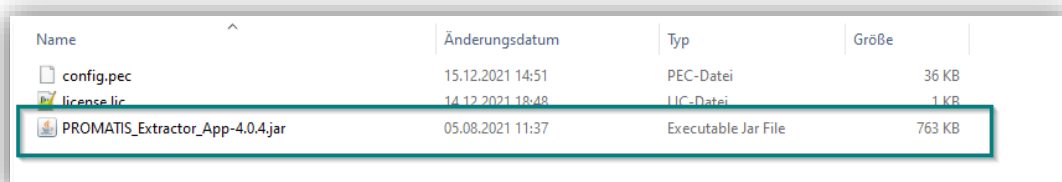

Then open the bin folder from your installed PROMATIS_Extractor_App and check the name of the jar file.

Introduction

Log4j is a popular logging library for Java applications. It is used for the high-performance aggregation of log data from an application. Recently new versions of Log4j have been published to address security vulnerabilities. Due to the fact that PROMATIS Extractor App is a java based application, the most current version has been extended to include a patch for log4j.

Please be aware, that we recommend to have Java [™] SE Runtime Environment Build 1.8.281 installed on the PC.

For Oracle Fusion Cloud Application users, this App installation is completed with chapter 1.4. For Oracle E-Business Suite Application users, this App installation is completed with chapter 1.5. After all required installation steps are done completely, the PROMATIS Extractor App can be used as usual.

In case more background information on installation procedures might be needed, please refer to the installation guide “PROMATIS_Extractor_4.0.4_<version>_Installation Guide_with Plugins” from the last delivery.

For assistance with the installation or if you have any further questions, please contact our support team via support@promatis.de.
